

effiant gas,
 combining
 power of
 platina
 prevented by,
 105, 108
 Iodide of lead,
 electrolysis of,
 149
 Hydrogen and
 action of
 Platina on, 86,
 94, 102
 Particles,
 nascent state of,
 no
 - oxide of
 mercury, 120
 phosphoric acid
 not an
 electrolyte,
 Physiological
 effects of
 common
 electricity, 18;
 of magneto -
 elec-
 tricity, 23;
 of thermo-
 electricity,
 24; of
 voltaic
 electricity, 5
 J-lates,
 interposed,
 causing retarda-
 tion of
 electrolysis, 218-
 225
 Platina,
 cleanliness
 essential, 98,
 combining power
 of, 85-91,
 98, 102 —
 interferences
 with,
 105;
 spongy, in
 relation to
 hydrogen,
 104, 107, 108
 Polar
 decomposition,
 12, 15, 53
 Polarised light
 in relation to
 elec-
 trolyte, 197
 Pole defined,
 112
 Poles, electric,
 nature of, 50, 63,
 82;
 evolved bodies
 at, 75 —
 character
 of, 133; of
 air, 48, 50,
 82; of
 metal, 82; of
 platina, 83,
 85, 90;
 of water, 61,
 74, 81
 Potassium
 nitrate,
 electrolysis of,
 209
 Potassium,
 sulphuret of.
 See Sul-
 phuret of
 potassium
 Protochloride of
 carbon, 119
 Protosulphuret
 of potassium
 electrolyte,
 269
 Riffault and
 Chompre on
 electro-

chemical
 decomposition,
 on, 58, 66
 Schioiibein on
 voltaic
 condition of
 iron, 316
 Silver
 chloride,
 electrolysis
 of, 76,
 208;
 voltaic
 effects in sul-
 phuret of
 potassium,
 268
 Spark,
 produced by
 animal elec-
 tricity, 25;
 by common
 electri-
 city, 19; by
 magneto-
 electricity,
 23; by
 thermo-
 electricity,
 24
 by voltaic
 electricity,
 5; without
 metallic
 contact,
 198
 Sulphate of
 soda,
 electrolysis
 of,
 of
 antimony not
 an elec-
 trolyte, 120
 Sulphuret
 of carbon,
 combining
 power of
 platina
 prevented
 by,
 107

iulphuret of potassium,	metallic contact, 175, 298
active circles excited by, 259, 265;	Voltaic current, 6, 175
alternating currents in, 270; and heated metals, 279; as conductor, 238, 241 - •	Voltaic electricity, 3; chemical action as source of, 179, 180, 181, 185, 190, 282; chemical effects of, 5; discharged by hot air, 4; evolution of heat by, 5; identity with common electricity, 8, 12, 16, 31; magnetic force of, 5, 7; physiological effects of, 5; relation by measure to common electricity, 27; spark produced by, 5
'ulphuret of silver, conducting power of, 44	
Sulphuretted solutions, exciting action of, 194	
Sulphuric acid, conduction by, 38, 72, 138, 188, 240	
Sulphurous acid, electrolysis of, 138	
Tartaric acid, in electrolytes, electrolysis of, 143	
Thermo - currents 277	
Thermo-electricity, 24	
Thermo-electric phenomena, 308	
Tin, voltaic effects in sulphuret of potassium, 261	
Torpedo fish, electric discharge of,	
Transference of bodies. <i>See</i> Decomposition, electro-chemical	
Volta-electrometer, 84, 122	
Voltaic battery, 211; current in, 212, 213; in action, general remarks on, 226-232; without metallic contact, 298; zinc in, 214, 215	
Voltaic circles, Fig. 43, p. 201; active, 259; associated, 211; combinations of substances employed in, 256; effect of air, 274; effect of dilution, 284, 290; effect of interposed plates, 218-225; effect of motion of fluids, 273; effect of temperature, 271, 274, 279, 281; inactive, 241 <i>et seq.</i>	
order of metals in, 295; proto-sulphuret of potassium in, 269; relation of ions in, 200; simple, 172; sulphuret of potassium in, 238, 241, 259, 265; without
